

Reducing Health Inequity in Indonesia

500 Trillion Rp of health
expenditure (around 3.5%
GDP)

Weak tax-system and
low government health budget

Health Human Resources and Inequity

A centralized Health Insurance in a Decentralized Health System

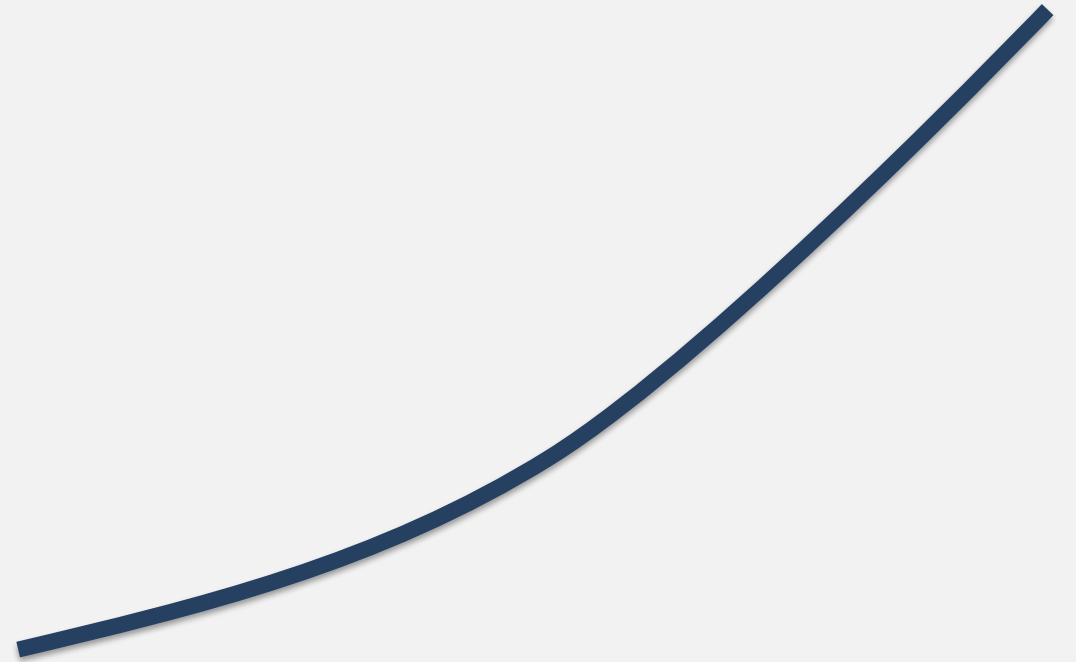

Double Burden of Disease
and weak healthy lifestyle
regulation

Limited Quality Control in Health Care

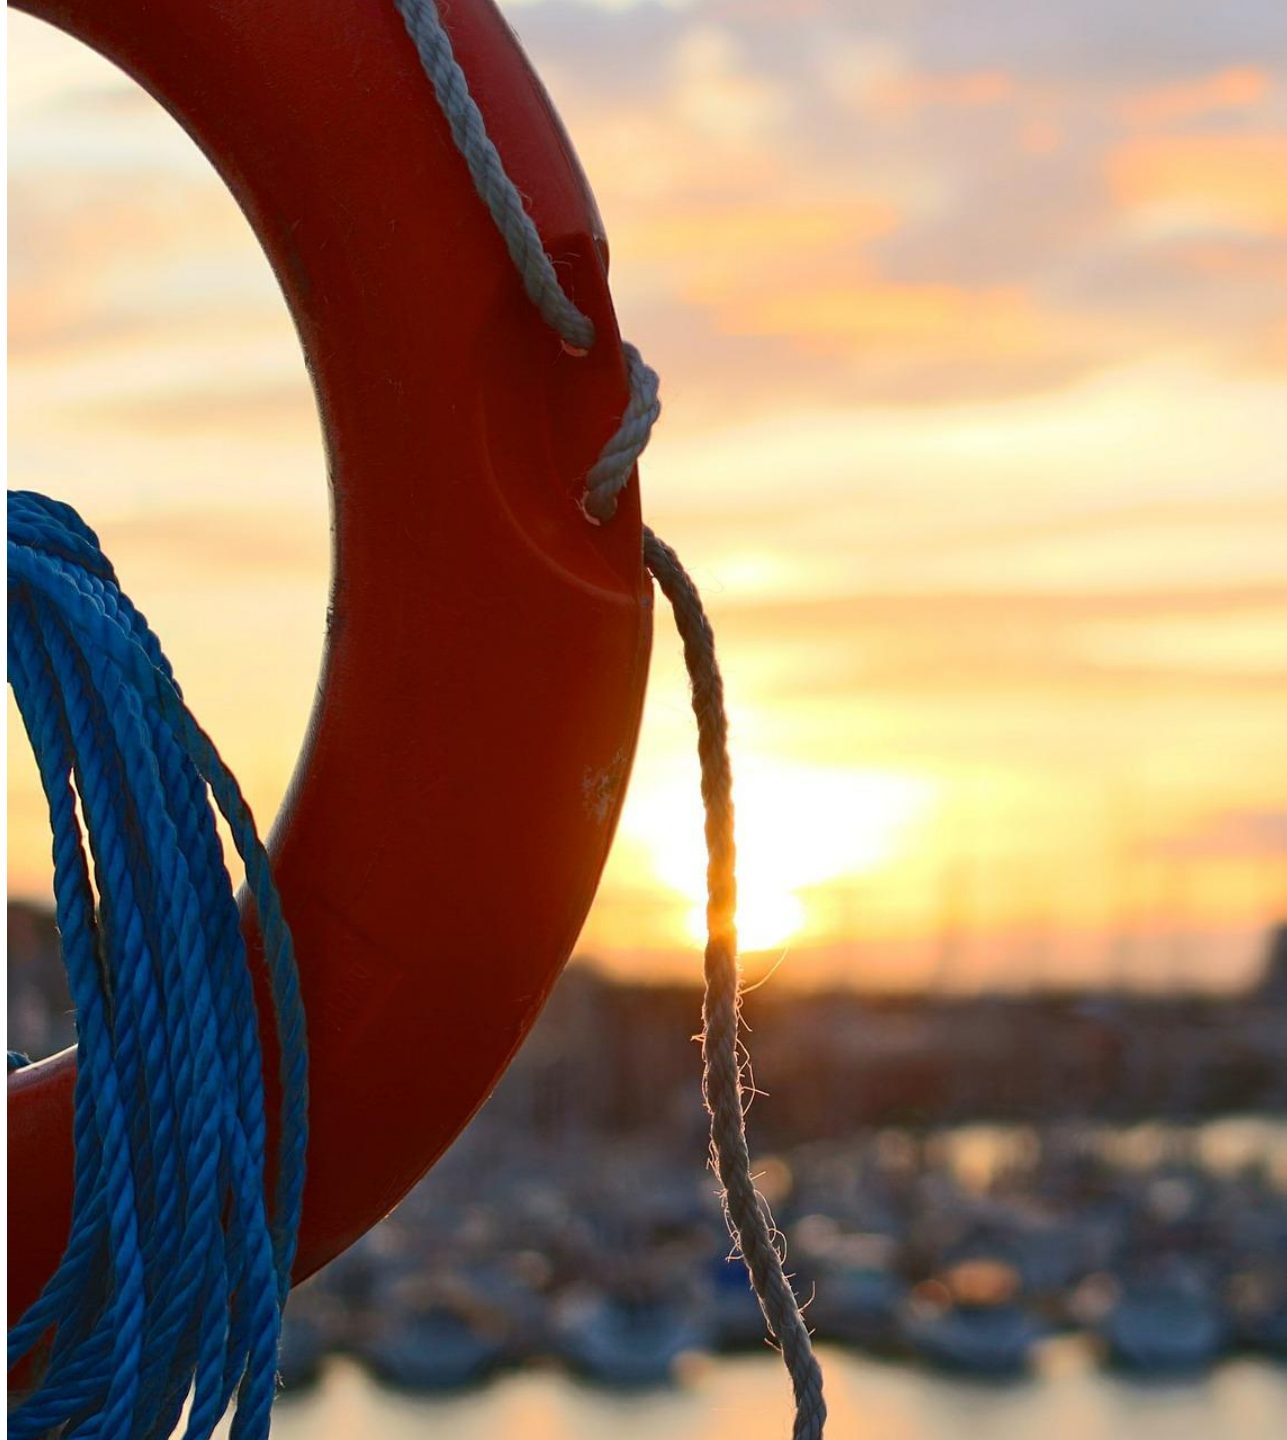

Increasing GDP and Promising
Private Sector Funding

Central and Local
Government, Political
attention to Health Care

Better Health Insurance Schemes

Community Initiatives for improving Healthy lifestyle
